

Guttify Product Guide

Guttify is an Indian gut-health brand (HQ: Gurugram) that makes effervescent (fizzing) tablets — you drop one tablet into a glass of water, let it dissolve, and drink it. All products are described by the brand as Ayurvedic/herbal blends, clinically tested, with no added sugar and no preservatives. Below is a detailed breakdown of each core product.

1. Digest Boost — Digestion & Constipation Relief

What it does: An Ayurvedic blend of fiber, digestive enzymes, and mild herbal laxatives (Triphala, Pea fiber, Isabgol/psyllium husk) designed to relieve constipation, reduce bloating, and support regular bowel movements without harsh chemical laxatives.

Key ingredients: Triphala (Amla, Bibhitak, Haritaki), Pea fiber, Isabgol, Hing (asafoetida), Chitrak root extract, Shunti (ginger) extract, Kutaj seed extract, papaya leaf extract.

Why you'd take it: For people with irregular digestion, chronic bloating, or constipation who want a gentler, natural alternative to laxatives, and who want to improve overall gut microbiome health and nutrient absorption over time.

How to use: Dissolve 1 tablet in a glass of water; best consumed before breakfast or lunch.

Side effects / cautions:

- Not recommended for pregnant or lactating women.
- No specific side effects listed by the brand, but any fiber/herbal

laxative blend can cause mild gas or loose stools when you first start, especially if you increase the dose too quickly.

- Contains Hing (asafoetida) and other herbs — those with known allergies to these should avoid it.

Age group: Marketed as an adult daily-use supplement. The brand does not publish a specific age range on the product page; as with any Ayurvedic/herbal supplement, it's not intended for children without medical advice, and pregnant/lactating women are explicitly excluded.

2. Acid Ease — Acidity & Heartburn Relief

What it does: A fast-acting effervescent meant to neutralize stomach acid, relieve heartburn/acid reflux, and reduce gas — positioned as a natural alternative to chalky antacid tablets.

Key ingredients: Triphala, Ginger extract, Blueberry (antioxidant), Goji berry, Apple cider vinegar, Lactobacillus acidophilus (a probiotic, ~3 billion CFU), Isabgol husk, Inulin (prebiotic fiber).

Why you'd take it: For occasional or frequent acidity, heartburn, or a burning sensation after meals, and for people who dislike the taste/texture of conventional antacids.

How to use: 1 tablet in water, ideally before breakfast or lunch.

Side effects / cautions:

- Not recommended for pregnant or lactating women.
- Contains apple cider vinegar and probiotics — people with acid sensitivity to ACV, or on medications affected by probiotics, should check with a doctor.
- No other side effects are listed by the brand.

Age group: Adult use; not specified for children. Pregnant/lactating women excluded.

3. Liver Lift — Liver Detox

What it does: A liver-support effervescent meant to aid natural detoxification, reduce fatigue, support metabolism, and improve digestion by supporting liver function.

Key ingredients: Milk Thistle, Triphala (Amla, Bibhitak, Haritaki), Moringa oleifera leaf extract. (Marketing copy also mentions Turmeric and Dandelion Root as part of the concept, though the listed ingredient panel centers on Milk Thistle, Triphala, and Moringa.)

Why you'd take it: For people wanting general liver support, reduced bloating/water retention, better energy, and clearer skin — often used by people who drink alcohol regularly, eat a lot of processed food, or feel sluggish/fatigued.

How to use: 1 tablet in water, before breakfast or lunch. Available in Orange and Strawberry flavors.

Side effects / cautions:

- Not recommended for pregnant or lactating women.
- Milk thistle and Moringa are generally well-tolerated, but can occasionally cause mild digestive upset in sensitive individuals.
- This is a wellness/detox supplement, not a treatment for diagnosed liver disease — anyone with an existing liver condition should consult a doctor before use.

Age group: Adult use; not specified for children. Pregnant/lactating women excluded.

4. Piles Pure (Orange / Cola Blast) — Piles / Haemorrhoid Relief

What it does: A herbal effervescent aimed at reducing pain, swelling, bleeding, and discomfort from piles (haemorrhoids), while also

supporting smoother, less strained bowel movements to prevent recurrence.

Key ingredients: Nagkesar (reduces bleeding), Ashwagandha, Moringa, Guggal, Bibhitak, Amla, Neem leaf extract, Inulin fiber, Pea fiber, Vitamin C, Harad (Terminalia chebula).

Why you'd take it: For people experiencing piles/haemorrhoid symptoms (pain, swelling, bleeding, straining) who want a non-invasive, oral herbal option alongside dietary changes (the brand itself recommends avoiding spicy/oily food and non-veg while using it, per customer reviews).

How to use: 1 tablet in water, before breakfast or lunch. Available in Orange and Cola Blast flavors.

Side effects / cautions:

- Not recommended for pregnant or lactating women.
- The brand states it's "100% Ayurvedic with no reported side effects" and free from heavy metals, pesticides, and steroids — but this is a manufacturer claim, not an independent clinical finding.
- For persistent, worsening, or bleeding piles, medical evaluation is still advisable rather than relying on a supplement alone.

Age group: Adult use; not specified for children. Pregnant/lactating women excluded.

5. Apple Active — Weight Management / Metabolism

What it does: An Apple Cider Vinegar (ACV) effervescent meant to support digestion, boost metabolism, and aid weight management — designed to avoid the harsh taste and enamel-erosion concerns of liquid ACV.

Key ingredients: Apple cider vinegar, Garcinia cambogia extract, Green coffee seed extract, L-Carnitine, Vitamin B6 & B12, Beetroot extract, Pomegranate extract.

Why you'd take it: For people looking for metabolism support, reduced bloating, and a more convenient way to consume ACV as part of a weight-management or gut-health routine.

How to use: 1 tablet in water, before breakfast or lunch.

Side effects / cautions:

- Not recommended for pregnant or lactating women.
- Contains Garcinia cambogia and green coffee extract (caffeine-adjacent stimulant-type ingredients) — people sensitive to caffeine, with blood sugar conditions, or on weight-loss/psychiatric medications should check with a doctor, since Garcinia and caffeine sources can interact with certain medications.
- ACV-based products can, in general, cause mild throat or stomach irritation in sensitive individuals if not properly diluted (Guttify's effervescent format is meant to reduce this risk compared to liquid ACV).

Age group: Adult use; not specified for children. Pregnant/lactating women excluded.

General Notes That Apply Across the Range

- **Format:** All are effervescent tablets — dissolve 1 tablet in a glass of water, let it fully fizz, then drink. Best taken before breakfast or lunch.
- **Common exclusion:** Every product page explicitly states it is **not recommended for pregnant or lactating women**.
- **Age group:** Guttify does not publish an explicit minimum age on its product pages. These are marketed as adult wellness/Ayurvedic supplements. As a general rule for herbal/Ayurvedic supplements, they're not intended for young children, and use in

teenagers, the elderly, or anyone with an existing medical condition (liver disease, GI disorders, diabetes, on prescription medication) should be checked with a doctor first.

- **Claims vs. evidence:** Guttify markets these as "clinically proven" and "scientifically backed," but detailed clinical trial data isn't published on the site — treat these as wellness supplements rather than medically prescribed treatments, especially for more serious conditions like haemorrhoids or liver disease.
- **General supplement caution:** Because these combine multiple herbal extracts, anyone with known allergies to specific ingredients (ginger, neem, ACV, garcinia, etc.), anyone on regular medication, or anyone with a chronic condition should consult a doctor before starting.
